

In Memoriam
Borislav D. Bojanov (1944–2009)

Friends and colleagues,

Academician Borislav Bojanov passed away suddenly on April 8, 2009. There are no words to describe the shock and overwhelming sadness that all of us, his friends, colleagues and students felt. It is so sad and unjust that a man of such talent, such capability, kindness and intelligence should now be so suddenly spirited away at the age of only sixty four, before he had achieved many of the things of which he was capable.

Professor Bojanov was a world-known mathematician, author of more than 130 papers, published in peer reviewed journals. His research spanned over a vast variety of topics, mainly in the area of Approximation Theory, Classical and Numerical Analysis. A common feature of his work was its beauty, the elegant arguments and deep insight, which had allowed him to not only solve particular mathematical problems, but also to find far reaching extensions and generalizations.

A substantial part of Professor Bojanov's research was devoted to problems of Optimal Recovery. Both his Ph.D. and Dr.Sci. Theses, entitled "Optimal Interpolatory and Quadrature Formulas" and "Optimal Recovery of Functions and Functionals", respectively, treat problems of finding the best approximation to functions (or functionals) from a given class when some partial information for these functions is available. Although Academician Blagovest Sendov was his PhD advisor, Professor Bojanov's interest to Optimal Recovery was first inspired by the discussions he had with Professor Nikolai Sergeevich Bakhvalov during his ten month visit to Moscow State University in the early seventies.

One of his first contributions to the theory of optimal recovery is the proof of existence, characterization and sharp error asymptotic of the optimal quadrature formula with preassigned multiplicities of the nodes for functions from the Hardy spaces H^p . He also solved completely the fundamental problem of existence, uniqueness and characterization of optimal quadrature formulas with multiple nodes for functions from the Sobolev classes. In particular, he proved that the optimal quadrature formula for functions from the periodic Sobolev classes must have equally spaced nodes, a fact that was conjectured long before Bojanov's contribution and resisted the attempts of many outstanding mathematicians.

The problems of optimal recovery methods for functions in the Sobolev classes are closely related to the investigation of specific spline-functions. Among Professor Bojanov's essential contributions to the theory of spline-functions are his results on monosplines of least deviation, B -splines and σ -perfect splines with Birkhoff knots, total positivity of the truncated power kernel in the general setting of Birkhoff type data, Markov interlacing property for splines and perfect splines, and others. Jointly with H. Hakopian and A. Sahakian, he wrote a monograph on spline functions.

Establishing existence and uniqueness of optimal recovery methods is a fairly difficult task. The attempt to obtain the best scheme may lead to a method which uses type of information, different from the initially declared one. As a by-product of settling the existence and uniqueness problem, Bojanov proved important comparison theorems for recovery schemes based on various type of information of the same cardinality.

Along with optimal methods of integration, Professor Bojanov investigated quadrature and cubature formulas that use non-standard type of informa-

tion and are exact for the largest subspace of a given linear space (Gaussian quadrature and cubature formulas). For example, he proved the existence and uniqueness of the generalized Gaussian quadrature for extended and for weak Tchebycheff systems, the existence of a quadrature formula with double algebraic degree of precision which uses Birkhoff type information about the integrand, the existence and uniqueness of a Gaussian “interval” quadrature that is based on linear combinations of integrals of the integrand over non-overlapping intervals with prescribed lengths. He showed the existence and uniqueness of a cubature formula for the unit ball in \mathbb{R}^m , which uses n integrals of the integrand over hyperplanes (Radon projections) and is exact for all polynomials in m variables of total degree $2n - 1$, the existence and uniqueness of the extended cubature formula for the ball in \mathbb{R}^m , based on surface integrals of the integrand or certain differential operators, and has the highest possible polyharmonic order of precision.

One of Bojanov’s favorite research topics was polynomial inequalities. He proved an old-standing conjecture of P. Erdős about the “longest” polynomial. In 1939, Erdős himself had shown that $\cos nt$ and its shifts are the only trigonometric polynomials with maximal length of their graphs among all trigonometric polynomials of order n whose uniform norm is bounded by 1 in $[0, 2\pi]$. He conjectured that the “longest” algebraic polynomial of degree n with norm not exceeding 1 in the interval $[-1, 1]$ should be $\pm T_n$, where T_n is the n -th Tchebycheff polynomial of first kind. Professor Bojanov gave a brilliant proof to this conjecture more than forty years after it was formulated. Simultaneously, he established a beautiful extension of the classical Markov inequality, showing that

$$\|f'\|_p \leq \|T_n'\|_p \|f\|$$

holds for every polynomial of degree n , where $\|\cdot\|$ and $\|\cdot\|_p$ are the $C[-1, 1]$ and the $L^p[-1, 1]$ norms, respectively, and $1 \leq p \leq \infty$. Both proofs are based on the observation that some functionals of polynomials are monotonic with respect to the quantities $h_k = |f(\xi_k)|$ that are the absolute values of the local extrema of the oscillating polynomial itself. It turns out that the length and the L^p norms of the derivative of the polynomial are such monotonic functionals. Professor Bojanov extended and refined the beautiful idea of the monotonicity with respect to the h ’s to obtain Markov and Turán type polynomial inequalities for algebraic polynomials with multiple zeros, for oscillating trigonometric polynomials and perfect splines. Recently, he obtained jointly with his student N. Naidenov a proof of another Erdős’ conjecture, the one concerning the maximal length of trigonometric polynomials on arbitrary interval.

Professor Bojanov’s refined taste for beautiful problems determined his work on several classical open problems. One of them is the famous Sendov conjecture about the critical points of complex algebraic polynomials. He proved that the conjecture is true at least “asymptotically”. Various extremal

problems for polynomials in the complex plane pertaining to Sendov's and Smale's conjectures are formulated in Bojanov's last written paper.

Bojanov was among the first mathematicians to apply the topological degree of a mapping to prove existence and uniqueness of solutions to various problems in Approximation Theory. He also worked on bivariate polynomials of least deviation from zero, moment preserving approximations, best one-sided L_1 -approximations by blending functions, interpolation by bivariate polynomials, Landau-Kolmogorov type inequalities and others. Some of his papers represent new, alternative insight to classical results in Approximation Theory, such as the Hobby-Rice and Gauss-Krein theorems, the Jackson theorem and its extension to Tchebycheff systems, the Remez inequality, the Bernstein comparison theorem for best uniform approximation of smooth functions and others. Recently, he suggested alternative proofs to the classical V. Markov inequality, as well as to some of its generalizations given by R. Duffin and A. Schaeffer.

Being a world class internationally recognized researcher, Borislav Bojanov had been invited to give lectures and shared his experience at various research centers and universities all over the world. He was an invited speaker at many prestigious mathematical forums and conferences, among which was the First European Congress of Mathematics in Paris in 1992.

Professor Bojanov served for fifteen years at the Editorial Board of *Journal of Approximation Theory*. He was the founder of *East Journal on Approximations* and the journal's Editor in Chief.

Professor Bojanov supervised ten PhD students and affected the scientific life of many others. Nowadays, his students have successful careers in the academia and the financial industry in Bulgaria, USA, Canada, Brazil and the United Kingdom. We, his students, commemorate him with respect and gratitude for all that he has given us.

Professor Bojanov was a great human being, a fine mathematician and an incredible Teacher. He lived a remarkable life, one that inspired us, his students, greatly. His attitude, broad range of interests and happy demeanor made him a wonderful person to know. He was patient, and generous with his time and affection, always ready to help and guide us through our professional journey. He was not only our Teacher and showed us how to become mathematicians, but he was like a father who taught us to be honest, reliable, persistent, and how to face the challenges of life at any level. Professor Bojanov was philosophical in his approach to life. He had a great perspective, especially when it came to little things, never displaying anger or impatience. Instead, he showed a great dignity and humour. Even when he was critical of somebody or something, he managed to show it in a unique, delicate way, with a joke or interesting story. We will miss his perspective and his gentle humor, the depth and scope of his knowledge, the warmth he extended to everyone he met. We will remember his friendly smile, his endless energy,

his encouraging words and his pride of being a Bulgarian. Professor Bojanov always talked with such excitement about our glorious past and history, about the numerous achievements of the Bulgarians abroad, about the quality and the potential of our students and our nation. He was well aware of the needs of our young generation and was the first to initiate a movement for the declaration of the education as a national priority for Bulgaria. His students were always his first concern. During his service as a Dean, he used the entire bonus for his Dean position to create Fellowships for talented students with financial difficulties. We became aware of his generosity only after he passed away, when some of the few people who knew revealed it. He had organized the payment of the stipends in such a way that the students didn't know the source of the money. That was him, the person Borislav Bojanov: generous, noble, delicate, modest, with strong beliefs, hopes and ideals.

Professor Bojanov pursued his many endeavours diligently, and always rose to meet a challenge. As a Dean of the Department of Mathematics and Informatics at Sofia University, he raised money to renovate and extend the department building. A whole new floor, new auditoriums, offices, apartments for visitors, elevator and a ramp for handicapped students were added to the building, which became the first education building in Bulgaria with built-in access for students with special needs. He also personally participated in the remodeling of the park around the building. It now has a completely new look with its gardens, alleys, ornamental clock, chess corner and chapel and is a nice secluded spot for not only the students but also for the people living in the neighborhood.

On the scientific side, Professor Bojanov maintained and broadened the research activity at the Department. He revived the departmental Colloquium and organized the international conference "Pioneers of Bulgarian Mathematics", dedicated to two of the most prominent Bulgarian mathematicians, Academicians N. Obreshkov and L. Tchakaloff. Four BS programs and more than fifteen MS programs were created under his guidance. Borislav Bojanov was an extremely successful Dean whose contributions to the department earned the respect, gratitude and love of his colleagues. We include only a few comments from his colleagues, friends and former students:

"... He was always encouraging the young mathematicians and helping them in any possible way - from the formulation of a problem to work on, to technical details in the manuscript preparation, no matter whether he is a co-author or not. ... It is true what people say that it is not possible for a man to be a great scientist without being a great human being. Professor Borislav Bojanov was very friendly and accessible man, whose good mood and desire to work was contagious. We lost a great scientist and human being."

(N. Naidenov)

“I was fortunate to work under the supervision of this extraordinary mathematician and wonderful man. His nice character, enthusiasm, love for his work and his spirit are a model for everybody who knew him. ... My words are powerless to express my gratitude for Professor Bojanov.”

(I. Georgieva)

“I am so sorry... I was terrified when I opened the e-mail with this news. Whatever I say it will not be enough. We, who were close to him, know what a wonderful person he was. I just can not believe it. A person is powerless in front of death, but I am sure that, besides his family, there are a lot of other people who sincerely grieve for him. We, his students, are among them. I am also sure that he will always be with us in a certain way...”

(P. Petrov)

“... I lost a Teacher and a Friend ...”

(D. Dryanov)

“... Whatever one could write about Professor Bojanov, it will not be enough to entirely describe his personality and contributions. His most important qualities, I think, are his enormous love for Bulgaria, his outstanding contributions in mathematics, his unforgettable teaching ability, his students, and the fact that he was a wonderful man. Thank you, my Teacher!”

(L. Milev)

“Nothing can fill in the huge emptiness in our lives after the death of Professor Bojanov. Maybe we still can not and do not want to accept that He is not anymore among us. I can not find words to thank him for his help, support, trust and faith in me, for the good words and encouragements, for the active environment and possibilities to meet world class scientists, for everything ... Thank you!”

(V. Gushev)

“His spirit will always be with us...”

(R. Uluchev)

“... Borislav was a great patriot and was working hard for the benefit of our country. As Dean of the Faculty of Mathematics and Informatics of Sofia University, Professor Borislav Bojanov made significant progress in improving the conditions for education in a difficult political and economic environment. His creation of the East Journal on Approximations is an example of his drive to promote Bulgaria as an important country in mathematics.”

(Bl. Sendov)

“... A great mathematician, a kind person...”

(M. Vianello)

“... He was a great mathematician and remarkable man.”

(Vl. Babenko)

“... I was shocked and deeply saddened by the sad news. ... He was a good friend and a great mathematician.”

(Y. Xu)

“... It is a big loss for all of us and for the whole academic association, not only mathematical!”

(G. Milovanovic)

“... Indeed it is a big loss for many people all over the world.”

(B. Kashin)

“... This is a tremendously sad news, indeed. Borislav was a great mathematician, and a very warm person, our friend!”

(K. Oskolkov)

“... I am keeping him in my mind as a great mathematician and a great friend of all mathematicians who had the chance to meet him.”

(W. Plesniak)

“... This is terrible loss for the FAMILY, for the MATHEMATICAL FAMILY and for his FRIENDS. This is also serious loss for the SCIENCE.”

(Z. Ciesielski)

“... That is indeed very, very sad news. Borislav and I were good friends even though we did not see each other often enough, especially these last few years.”

(A. Pinkus)

“... It is really a shock and a big loss.”

(S. Konyagin)

“... I am so shocked I do not know what to write. We are going to live in another world - world without Borislav.”

(H. Hakopian)

“... Borislav was an excellent mathematician, powerful administrator, unusually fine person. He was a friend. It is sad when friends pass away.”

(V. Arestov)

“... I am so sorry, and I don't know what to say. My sincere condolences to his family (which unfortunately I did not know) and to his extended scientific family (which I had and will always have a privilege to be a part of). I am sharing your pain.”

(A. Shadrin)

“... He was a great friend and fine mathematician. All of us enjoyed his remarkable vitalistic attitude. Last year I met Borislav twice and I was very impressed...”

(F. Marcellan)

“ ... I am shocked by the terrible news ... I liked him as a person and as a mathematician.”

(N. Dyn)

“ ... I myself considered Borislav my no.1 friend among all mathematicians whom I got acquainted during my many travels everywhere in the world. Somehow he was such an open, friendly, warm-hearted, vigorous, supportive, nice personality, that I always felt that I can count on him. Now it all belongs to the past ...”

(S. Revesz)

“ ... I am shocked and so sorry ... It is really terribly sad. ... I still cannot believe that Borka passed away.”

(H. Wozniakowski)

“The unexpected, premature and shocking death of acad. Borislav Bojanov - Borkata deeply saddened many of his friends, colleagues and students from Bulgaria and all over the world! I lost a real friend, the profession lost an amazing mathematician, and our country lost a patriot and a great Bulgarian.

A man with exceptional values, a citizen with deep understanding of the fate of our people and country, a scientist with extraordinary contributions, a colleague with high moral and principles and a friend with a rare sense of responsibility – all this was the person Borislav Bojanov – one of the most prominent Bulgarians of our time.

Borkata will stay forever in our hearts, and his endless humor, constant optimism, cheerful character and wisdom will warm our souls in good times and will support us during the challenges of life.”

(R. Lazarov)

We all will miss our Teacher, colleague and friend dearly. But we will treasure his memory forever. May he rest in peace.

On behalf of his students, friends and colleagues,

Dimitar Dimitrov
Geno Nikolov
Guergana Petrova

CURRICULUM VITAE
of
Borislav Bojanov

PERSONAL DATA

Birth Place: Shemshevo, Bulgaria
 Birth Date: 18 November, 1944
 Wife: Rositza
 Sons: Yavor, Tchavdar, and Tihomir
 Grandsons: Kalin and Nikola

EDUCATION

1975 University of Sofia, Ph. D. in Mathematics
 Thesis: Optimal Interpolation and Quadrature Formulae
 Supervisor: Acad. Blagovest Sendov

1965–1968 Wrocław University, Wrocław, POLAND, M. S.
 Supervisor: Prof. Stefan Paszkowski

1962–1965 University of Sofia, Sofia, BULGARIA

ACADEMIC CAREER

1985–2009 University of Sofia, Sofia. Professor of Mathematics
 2003–2007 Dean of the Faculty of Mathematics and Informatics
 1977–1985 University of Sofia, Sofia. Associate Professor
 1970–1977 University of Sofia, Sofia. Assistant Professor
 1968–1970 University of Sofia, Sofia, Instructor

HONORS

1992, Invited speaker in The First European Congress of Mathematicians,
 Paris

1973, Union of the Balkan Mathematicians, Award for young researchers,
 for outstanding research achievement

Ph.D. STUDENTS

Georgi Grozev (1987)	Geno Nikolov (1990)
Rumen Uluchev (1990)	Dimitar Dimitrov (1992)
Hrisina Draganova (1998)	Lozko Milev (2000)
Natasha Dicheva (2001)	Petar Petrov (2001)
Nikola Naidenov (2003)	Irina Georgieva (2005)

JOURNAL EDITOR

East Journal on Approximations, Editor-in-Chief, 1995 – 2009
Journal of Approximation Theory, Elsevier, 1994 – 2009
Numerical Algorithms, Springer, 2007 – 2009
Annuaire l'Université de Sofia, Faculté Phys.-Mathématique, Bulgaria
Numerical Mathematics: Theory, Methods and Applications, China
Facta Mathematica (Niš), Serbia

 1984 Université de Montreal, Montreal, Canada (2 months)
 1971–1972 Moscow State University (10 months)

SELECTED ADDRESSES

2008 International Conference on Approximation in scientific computing (ICASC'08), Beijing, China,
Optimal recovery of bivariate functions and integrals

2008 IX International Conference "Approximation and optimization in the Caribbean", San Andres Island, Colombia,
 Plenary lecture: *Majorization of polynomials on the plane*

2007 "Frontier lecturer", Texas A& M University
 1. *Majorization of polynomials on the plane*
 2. *Interpolation by bivariate polynomials*
 3. *Two famous conjectures about the critical points of polynomials*

2007 International conference "Extremal problems in complex and real analysis", May 21–27, Moscow, Russia,
 Invited mini course: *Extremal problems for oscillating polynomials*

- 2006 First Dolomites workshop on constructive approximation and applications, Alba di Canazei (Trento), Italy, September 8-12, 2006, Plenary speaker: *Interpolation by bivariate polynomials*
- 2005 International conference "Multivariate Approximation", September 25 - October 1, 2005, Bommerholtz, Germany, Plenary lecture: *Interpolation by bivariate polynomials*
- 2005 International conference "Harmonic Analysis and Approximations, III", September 20–27, Tsahkadzor, Armenia, Plenary lecture: *Interpolation by bivariate polynomials based on Radon projections*
- 2005 International conference "Function spaces, Approximation theory, Nonlinear analysis", dedicated to the centennial of Sergei Mikhailovich Nikolskii, May 23–29, 2005, Moscow, Russia, Plenary lecture: *Optimal quadrature formulae*
- 2004 Approximation and Probability, International conference on the occasion of the 70th anniversary of Professor Zbigniew Ciesielski, 20–24 September, Bendlewo, Poland, Plenary lecture: *Interval quadrature formulas of Gaussian type*
- 2004 5-th International Conference on Functional Analysis and Approximation Theory, Maratea, Italy, June 16–23, Plenary lecture: *Interpolation by bivariate polynomials*
- 2004 International conference celebrating the 70-th birthday of Laura Gori: Classical and New Approximation Spaces: Theory and Applications, Rome, February 5–7, Invited lecture: *Quadrature formulae of non-standard type*
- 2001 Tenth International Conference on Approximation Theory, St. Louis, Missouri, USA, Plenary lecture: *Markov-type inequalities for polynomials and splines*
- 2000 International Conference on Multivariate Approximation, Haus Bommerholtz, Germany, Plenary lecture: *Integration of Polyharmonic Functions*
- 1996 International memorial conference "D.S. Mitrinovic", Niš, Yugoslavia, Invited lecture: *Jackson and Whitney Constants*
- 1995 Conference dedicated to the 90th birthday of S. M. Nikolski, Moscow, Russian Academy of Sciences, *Polynomial Inequalities*
- 1994 Conference on Information Based Complexity, Dagshtull, *Two Effective Algorithms in the Recovery of Functions*
- 1994 Total Positivity and Applications, International conference, Jaca, Spain, Invited lecture: *Total Positivity of the Spline Kernel and its Applications*

- 1993 Paul Erdős Conference on Approximation Theory, Budapest,
Jackson's Type Theorem for Tchebycheff Systems
- 1992 First European Congress of Mathematics, Paris,
Invited lecture: *Optimal Recovery of Functions and Integrals*
- 1987 Conference on Approximately Solved Problems, Columbia University,
New York, USA
 σ -Perfect splines
- 1981 Oberwolfach, Germany, Conference "Numerical Integration"
Oscillating Polynomials of Least Norm
- 1978 Oberwolfach, Germany, Conference "Numerical Integration"
Uniqueness of the Monosplines of Least Deviation
